PANDEMIC VIRUS DISINFECTING PROGRAM

Hard Surface & Air Sanitation

As pandemic viruses, such as the **Coronavirus**, continue to evolve globally; SMYLiES is committed to providing safe and effective solutions to protect employees, families and the places they work. Sometimes facilities need the detailed attention and strength of germicidal and viricidal disinfectant programs.

Our Disinfecting Fogging System combined with our O-Zone Air Purification Program eliminates up to 99% of bacteria, viruses and odors on all exposed surfaces in your facility. Our fogger creates an electrostatic charge to the disinfectant allowing it to cover 100% of the surfaces treated, including hard-to-reach crevices such as keyboards. The disinfectant we utilize is environmentally safe and doesn't contain any harsh builders that will damage surfaces. It has a neutral pH and doesn't contain any dye or perfume that may trigger allergies. GS Neutral Disinfectant is an EPA hospital-grade disinfectant effective in preventing the spread of common bacteria and the following organisms: Salmonella, E-Coli, Flu, Hepatitis, Staph, HIV Types 1 & 2, MRSA, VRSA, and others.

The O-Zone generator we use in conjunction with our fogger, further assists in the elimination of odor causing bacteria and air purification. It is safe on all surfaces and is effective in sanitizing your facilities air for a great 1 - 2 punch when combined with the disinfecting fogging system.
